Diagram illustrating an Instant Flip (I-Flip) operation:

Initial State: $AB|CD$ (Left square, dashed diagonal DB)

Operation: Instant Flip (I-Flip)

Final State: $AD|BC$ (Right square, dashed diagonal AC)

No intermediate state; the flip is discrete and global.

[illegible]

Diagram illustrating the propagation of a flip-wave front in a 2D grid. The grid is divided into four quadrants by a solid horizontal and vertical line. Dashed diagonal lines represent the wave front's path. Shaded cells (gray) indicate the region where the wave front has propagated. A solid line labeled "Flip-Wave Front" points to the boundary of the shaded region. A label "Closure-consistent wall (halts propagation)" points to the right edge of the grid.
